Database Administrator (DBA) as a Service

The peace of mind of a modern DBA service operated by specialists

Supporting, optimising & adding robustness to database systems can incur large operational costs and high levels of resource to keep the database systems operational and up to date 24x7.

The Adatis Database Administrator as a Service (DBA as a Service) provides a comprehensive administration service for on-premises and cloud databases including Microsoft SQL Server, Azure SQL Managed Instance and Azure SQL Database workloads related to critical transactional and analytical workloads.

Whether you have a handful of critical operational databases or an entire enterprise estate, Adatis can operate as a complementary specialist service to an existing in-house capability or provide a full outsourced operation.

The benefits of this service:

- Minimising costly disruptions to services and business critical processes.

- Providing visibility of your estate and its performance with efficient management.

- Reducing costly overheads and resourcing, enabling internal teams to leverage business knowledge for other valuable activities.

- Reducing operational and licensing costs.

5 pillars of the Adatis DBA as a Service

Database Management & Maintenance

Manage and support the database estate, solving problems or configuration issues and maintaining the health and performance of the organisation's databases.

Proactive Monitoring & Alerting

Monitoring the estate for any outages, error messages and proactively checking for issues that can cause an outage to the database or SQL Server instance availability, resolving before there is disruption.
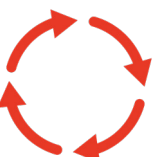

Security & Access Management

This includes encryption implementation, security audit implementation and compliance with industry regulations. We advise on data governance best practice across the estate.

Capacity Planning & Resource Management

To support optimal performance of databases, we ensure that it has the resources it needs to meet the demands of the business. This includes monitoring and forecasting growth and planning for capacity and resource needs.

Patching & Version Lifecycle Management

We keep the database estate up to date with the latest security patches and software versions to mitigate the risk of any service disruption or degraded performance.

Build a flexible, custom schedule that is tailored to your requirements

Why choose Adatis?

Adatis are a leading Microsoft specialist Data Analytics and Business Intelligence consultancy. We work in flexible, agile and collaborative ways to help organisations unlock the power and value from their data, helping to improve business performance, better serve and engage customers, empower employees, uncover efficiencies, and enhance decision-making. We combine technical expertise with deep understanding of people and processes, helping organisations to deliver value, faster.

Finally, we love what we do – we are geeks!

Adatis DBA as a Service could help you.

The service fully supports your existing in-house capability without the need to provide an in-house specialist team. You also have the ability to scale up the service and scale out to provide ad-hoc development capability and other auxiliary services.

If you would like to learn more, or get started with DBA as a Service, then please get in touch.
