Adatis assist a world-leading animal genetics organisation with a data architecture review and analysis services build.

Situation.

A world leading animal genetics organisation had built a new Azure data warehouse and Power BI reporting capability however were experiencing issues with performance. This severely impacted key business processes and reporting of the financials on a monthly basis. The organisation also needed to validate the data architecture that had been implemented to support their future reporting requirements.

Approach.

Adatis followed a workshop approach to delivering the architecture review engagement, combined with time allowed for analysis, documentation, review and playback. Adatis carried out a full review of the data architecture and provided the organisation with validation and recommendations to improve the overall architecture. In addition, Adatis also ran a Proof of Concept which resulted in the decision to proceed and implement Azure SQL Server Analysis Services (SSAS). This will enable the genetics company to have predictable, scalable performance across regions.

Outcome.

Key performance challenges were fixed enabling the organisation to now complete their month end process efficiently. The organisation were provided with a data architecture roadmap, with options and recommendations with assurance that their data architecture could support business processes.

Adatis offer professional services specialising in data analytics, from data management strategy and consultancy through to world class delivery and managed services.

With offices In London, Farnham and Sofia they have been delivering innovative and successful solutions for clients since 2006.
