

Migrating a Government Healthcare Department to Azure to Enable Consolidated Reporting

Situation.

The healthcare department had recently utilised SAS products to capture and create a 'data warehouse' for disparate corporate information systems. These systems cover back office functions and are both on-premise and cloud based.

The department wanted to migrate this to Azure in order to reduce OpEx expenditure.

They also wanted to be able to consolidate reports from across the business and wished to upskill internally to create a self-service data environment

Approach.

Adatis worked collaboratively with the healthcare department to build a Modern Data Warehouse based on PaaS architecture and migrated the reports to Power BI.

The project was split into three phases.

Elaborate and design, a technical discovery was conducted in order to plan the next phase and devise what resources were needed. The **Delivery and Implementation** phase and lastly **Ongoing Support**, migrating the rest of the functionality and creation of more Power BI dashboards.

Outcome.

From working with Adatis this healthcare department will have an extensible Data Platform, powered by Azure giving them the ability for consolidated, effective reporting delivered by Power BI Premium. They will benefit from cost savings from switching off SAS Visual Analytics and dependency on SAS Grid. Adatis also worked with the department to upskill their team and provide knowledge transfer enabling self-service.

Adatis offer professional services specialising in data analytics, from data management strategy and consultancy through to world class delivery and managed services.

With offices in London, Farnham and Sofia they have been delivering innovative and successful solutions for clients since 2006.
